Heads up:

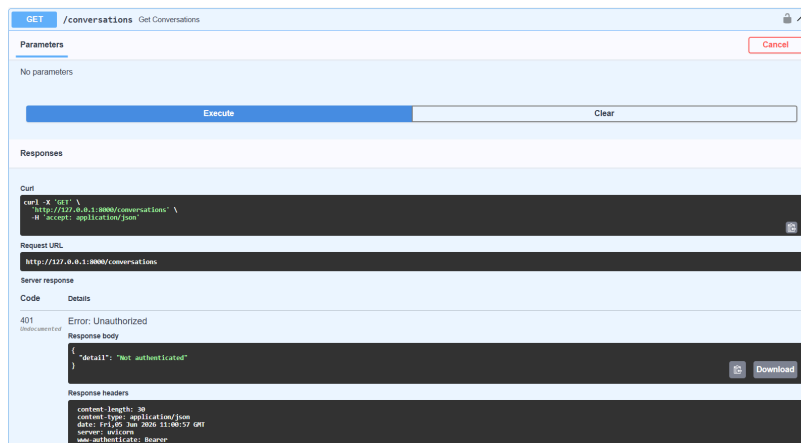

I am building a simple AI chat app with the following technologies.

- Backend: FastAPI (async, high performance)
- Frontend: React (Vite) + Tailwind CSS
- Database: PostgreSQL
- AI Layer: OpenAI API + LangChain
- Vector DB: FAISS or Chroma
- Auth: JWT + bcrypt
- Deployment: Render (backend) + Vercel (frontend)

Today's Progress:

I started with the checking of the API endpoints.

Since, some endpoints need login, I started with the conversations endpoint to see if it works if I do not login and got code 401 or unauthorized.

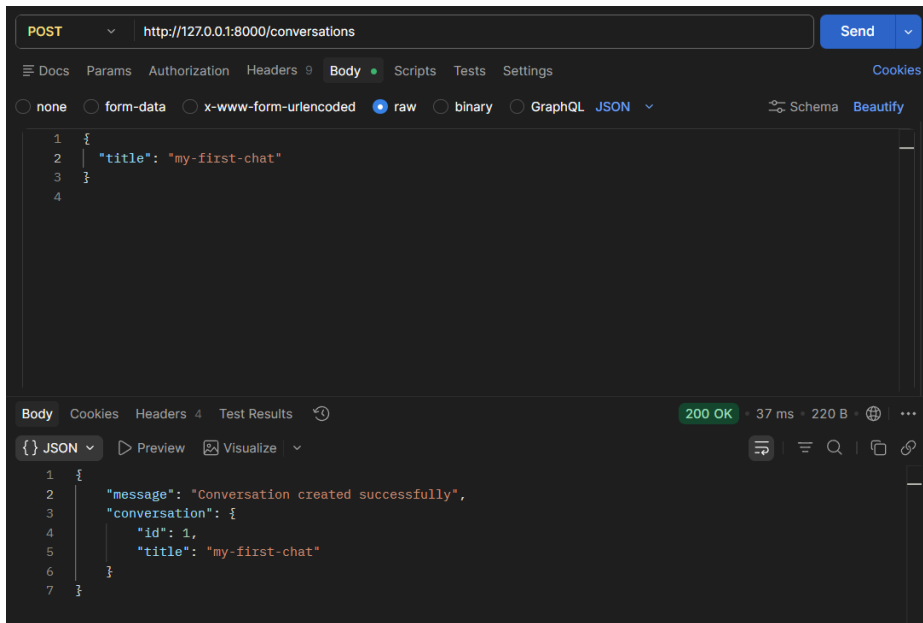

So, I registered a new user and logged in using the credentials.

The screenshot shows a REST client interface with a POST request to `http://127.0.0.1:8000/auth/register`. The request body is a JSON object: `{ "username": "sanket_rath", "email": "sanket.rath47@gmail.com", "password": "sanket123" }`. The response is a 200 OK status with a response time of 615 ms and a body size of 243 B. The response body is a JSON object: `{ "message": "User registered successfully", "user": { "id": 2, "username": "sanket_rath", "email": "sanket.rath47@gmail.com" } }`.

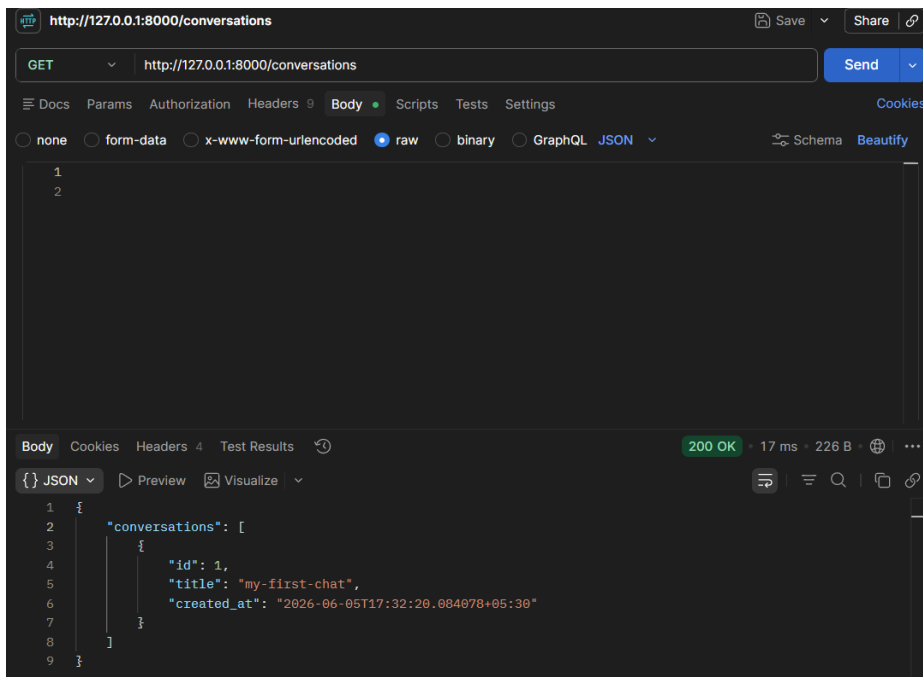

The screenshot shows a REST client interface with a POST request to `http://127.0.0.1:8000/auth/login`. The request body is a JSON object: `{ "email": "sanket.rath47@gmail.com", "password": "sanket123" }`. The response is a 200 OK status with a response time of 708 ms and a body size of 315 B. The response body is a JSON object: `{ "access_token": "eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.eyJzdWIiOiJzYW51ZXN0cmF0aDQ3QGdtYWlsLmNvbSIsImV4cCI6MTc4MDY2NDE3Mn0.3H-SPYLOUq-ZTnKWSnthiRFXZFyZ0oSv0-psuY5Ay9o", "token_type": "bearer" }`.

I copied this access token and added as a header and then tried to make a new conversation.

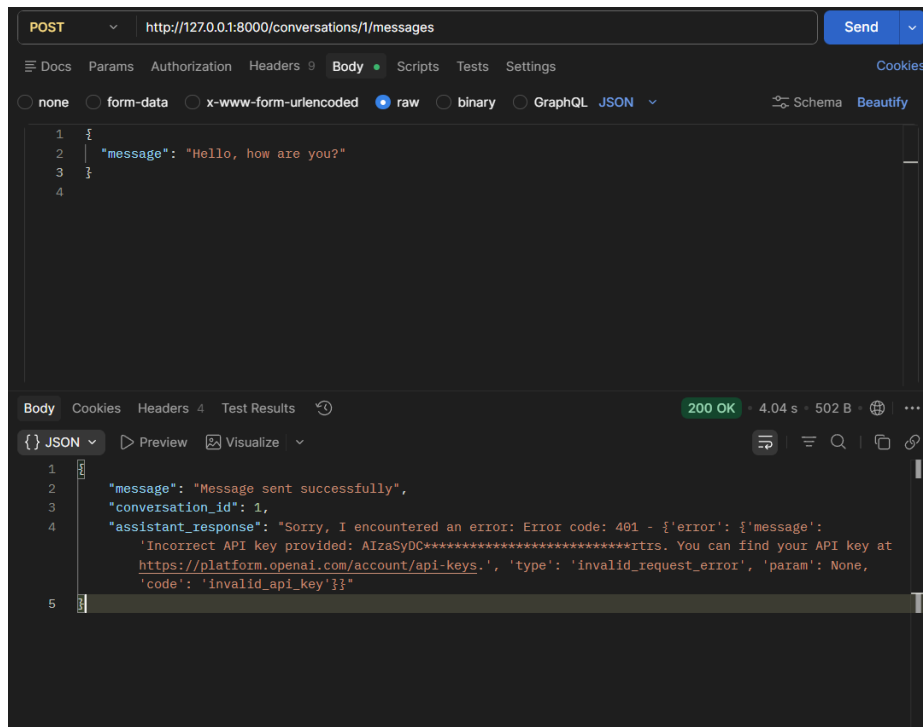

Key	Value	Description
☒ Authorization	BEARER eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVC...	
Key	Value	Description

Then I checked the GET endpoint for the conversations that lists all the conversations

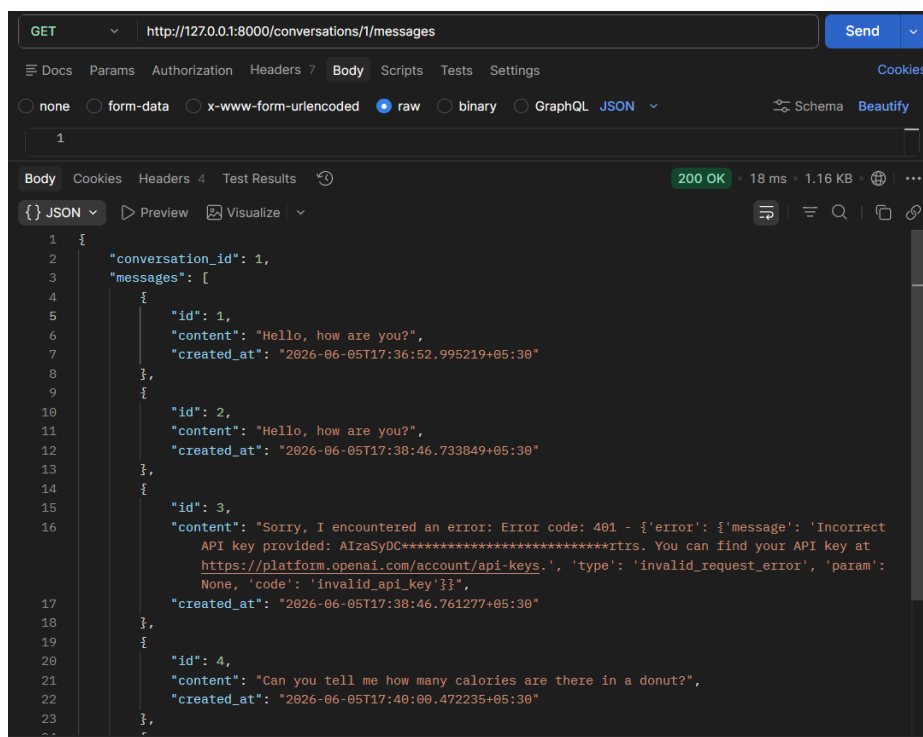

Next, I checked the POST and GET to send a message and list all the messages

```
POST http://127.0.0.1:8000/conversations/1/messages

{
  "message": "Hello, how are you?"
}
```

```
200 OK - 4.04 s - 502 B
{
  "message": "Message sent successfully",
  "conversation_id": 1,
  "assistant_response": "Sorry, I encountered an error: Error code: 401 - {'error': {'message': 'Incorrect API key provided: AIzaSyOC*****Itis. You can find your API key at https://platform.openai.com/account/api-keys.', 'type': 'invalid_request_error', 'param': None, 'code': 'invalid_api_key'}}"
```

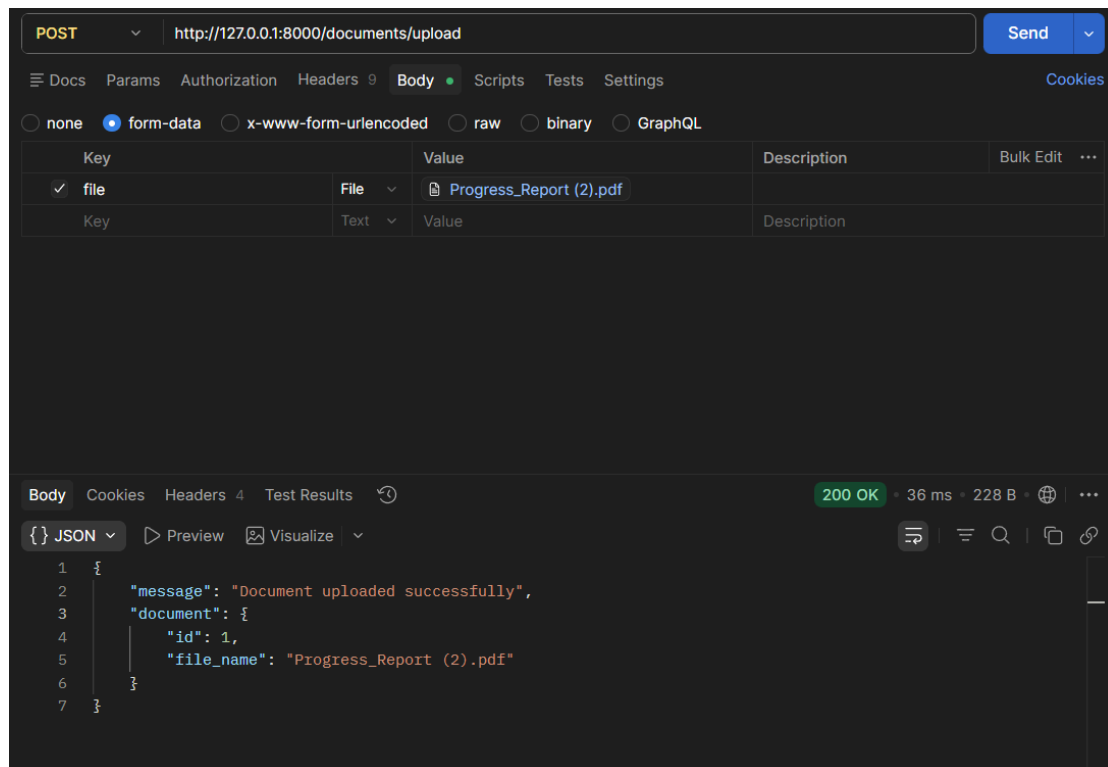

```
GET http://127.0.0.1:8000/conversations/1/messages

200 OK - 18 ms - 1.16 KB
{
  "conversation_id": 1,
  "messages": [
    {
      "id": 1,
      "content": "Hello, how are you?",
      "created_at": "2026-06-05T17:36:52.995219+05:30"
    },
    {
      "id": 2,
      "content": "Hello, how are you?",
      "created_at": "2026-06-05T17:38:46.733849+05:30"
    },
    {
      "id": 3,
      "content": "Sorry, I encountered an error: Error code: 401 - {'error': {'message': 'Incorrect API key provided: AIzaSyOC*****Itis. You can find your API key at https://platform.openai.com/account/api-keys.', 'type': 'invalid_request_error', 'param': None, 'code': 'invalid_api_key'}}",
      "created_at": "2026-06-05T17:38:46.761277+05:30"
    },
    {
      "id": 4,
      "content": "Can you tell me how many calories are there in a donut?",
      "created_at": "2026-06-05T17:40:00.472235+05:30"
    }
  ]
}
```

Note:

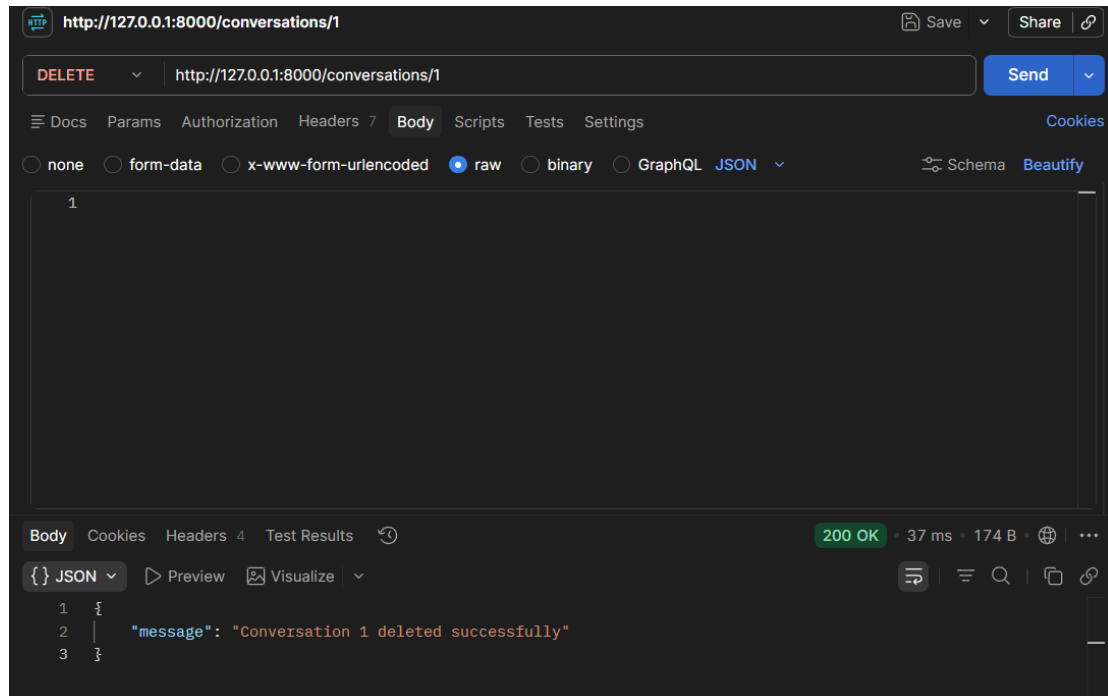

1. I had migrated from OpenAI to Gemini. Hence, there was a small issue.
2. New ID is assigned to sender message as well as to the AI response

Next, I added a file in the form-data to check the upload endpoint.

Since, the rag pipeline is not added. I could not check it.

Finally, I checked the delete conversation endpoint.

Next Checkpoint:

Tomorrow, I will complete the frontend part and start with the RAG pipeline as well.
